Email Attack Simulation

Our Email Attack Simulation leverages real-world and emerging threats to validate your email security controls to ensure your organization is protected from the most common attack vector.

The Email Attack Simulation service measures the effectiveness of your existing email security and identifies gaps in your defenses that would otherwise go unnoticed. Receive a daily, automated assessment of your email security stack against emerging malware found evading the most common email security providers (Microsoft, Google, Amazon).

HOW IT WORKS

- Our simulation runs a continuous assessment to determine the effectiveness of your email security solution by sending emails containing malware to a separate and secured inbox
- We leverage real-world threats, including emerging malicious content found capable of evading popular email security providers
- Next, we validate whether or not those threats reach your users
- Lastly, we send you an analysis about how your email security stack performed and point you to relevant blogs where the defense evasive threat was covered

WHAT YOU CAN EXPECT

- The complimentary assessment setup requires just a few minutes of your time and an internal email account
- Receive comprehensive daily reports detailing the types of threats that bypassed your email security defenses & potential steps that can be taken to close the gaps
- Try it free for a month and see how your defenses stack up
